

STEVE Accessibility Intelligence Report

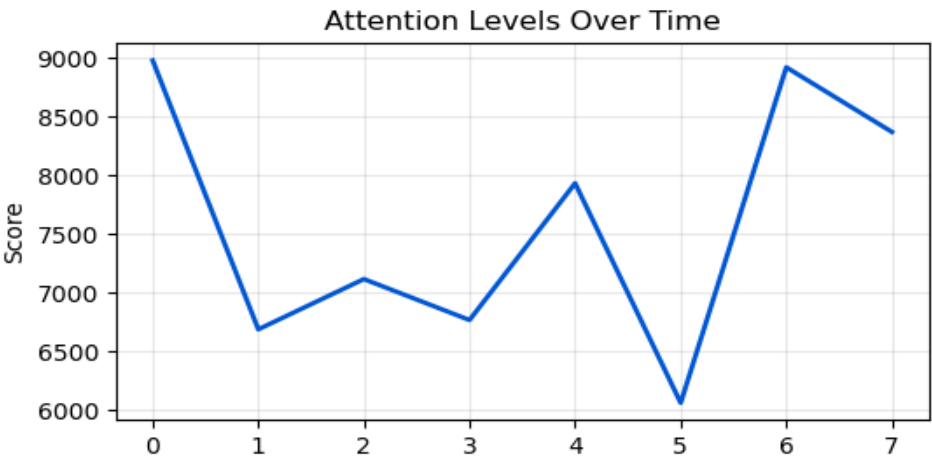

Generated on: 2026-05-01 06:24:29

Executive Summary

This report provides an in-depth analysis of the student's learning engagement, stress levels, and accessibility needs detected via computer vision during the study session.

1. Attention & Cognitive Focus

Average Score: 7606.2%
Impact: High attention efficiency correlates with better information retention and reduced study time.
Accessibility Use: Identifying attention drops helps in recommending optimal 'study sprints' and breaks for students with ADHD or cognitive fatigue.

2. Stress & Cognitive Load

Average Stress: 100.0% (Health Score)
Impact: Sustained high stress can lead to burnout and decreased problem-solving capabilities.
Accessibility Use: Monitoring stress spikes allows the system to trigger 'calm-down' prompts or simplify complex content for students with anxiety or high cognitive load.

3. Engagement & Interaction

Peak Engagement: 7795.2%
Impact: Active engagement indicates high-quality learning and interest in the subject matter.
Accessibility Use: Understanding engagement patterns helps personalize the delivery style (e.g., more interactive labs vs. reading) based on the student's unique sensory preferences.

Strategic Recommendations

Category	Action Item	Priority
General	Continue current study habits	LOW
